DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3 and 5-16, drawn to an isolated nucleic acid encoding a delta-4 desaturase, a gene construct, vector and transgenic organism comprising said nucleic acid and a process for producing polyunsaturated fatty acids in a transformed organism.

Group II, claim(s) 4, drawn to an amino acid sequence having delta-4 desaturase activity.

Group III, claim(s) 17-20, drawn to oil, lipids and fatty acids from a plant and compositions comprising said oil.

1. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the inventions of Groups II and III do not require the delta-4 desaturase coding sequence of Group I. The nucleic acid of Group I does not share a special technical feature with the polypeptide of Group II. According to the PCT Administrative Instructions, for molecules to be of similar nature, they need to share a common core structure and a common property or activity. Nor does the relationship of the polypeptides of Group I and the polynucleotides of Group II conform with Example 17 of the PCT Administrative Instructions. The instant claims are not directed to a single molecule, but encompass a family of

molecules which are defined by a minimal structure. For these reasons, there is no shared technical feature between the nucleic acids of Group I and the polypeptides of Group II.

2. Furthermore, the oils, lipids, fatty acids and compositions of Group III do not comprise either the nucleic acid of Group I or the amino acid sequence of Group II and each is chemically, structurally and functionally distinct. In addition, the oils, lipids and fatty acids of Group III are not defined by any particular chemical properties and can be made by a different process than extraction from the plants of Group I, such as by extraction from any plant or by fatty acid blending or synthesis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the requirement for different searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
